DETAILED ACTION

Reissue Applications

1. The reissue oath/declaration filed with this application is defective because it fails to identify at least one error that is relied upon to support the reissue application. See 37 CFR 1.175(a)(1) and MPEP § 1414.

The statement found in the declaration that "The original attorney failed to appreciate the full scope of the invention." is not considered a specific error under the statute.

2. Claims 1-51 are rejected as being based upon a defective reissue declaration under 35 U.S.C. 251 as set forth above. See 37 CFR 1.175.

The nature of the defect(s) in the declaration is set forth in the discussion above in this Office action.

3. Newly submitted claims 7-51 are directed to an invention that is independent or distinct from the invention originally claimed in the patent on which this reissue application is based for the following reasons:

4. Claims 7-24 are directed to an invention elected following a restriction requirement in the grandparent application, 08/621043, which were issue in U.S. Patent No. 5,955,081. Claims 25-51 are drawn to a composition of purified aloe-emodin acetate and methods of preparing the composition and methods of use. This invention is related to the other two inventions as a mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product

Art Unit: 1651

(MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as a treatment of eczema and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Since claims 1-6 are drawn to the invention prosecuted in Application No. 08/848,816 upon which this Reissue Application has been filed, this invention, claims 1-6, has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 7-51 have been withdrawn from consideration as being directed to a non-elected inventions.

Applicant is advised that these claims may be prosecuted in divisional reissue applications filed during the pendency of the instant application. Applicant is further advised of potential issues of improper recapture with regard to claims 7-24.

Claims 1-6 are identical to Claims 1-6 in Patent No. 5,852,060. These claims have not been amended and no error or defect has been alleged with respect to these claims.
